

Why hire TJB-INC Landscape Contractor to install your paver project?

- **TJB-INC** started installing interlocking paver systems in **1984**
- We have been trained by **ICPI** & many different manufacturers over the years
- All of our installers have taken & passed the **ICPI Installer Certification Programs**
- **TJB-INC** is certified as a **NicolockPro, TechoPro, UnilockPro** and by many other manufacturers as professional certified installers of their Interlocking Paver Systems.
- **TJB-INC** installs all jobs per **ICPI & ASTN Specifications**. (A copy is available if desired).
- Our installation crew spends over 85% of their time installing interlocking pavers
- We will happily provide you with references from recent & past paver installations
- We have both outdoor displays & on-line portfolio pictures available for your viewing
- We are in good credit standing with all of our suppliers & sub-contractors
- We carry **General Liability & Workman Compensation Insurance**. If you like, we will provide you with a certificate (proof) of insurance if we are your chosen contractor
- We always provide a written, itemized proposal outlining the scope of work and terms of payment, demolition and excavation, paving and base materials, plus taxes.
- We charge a fair price for quality work and stand behind our installations
- We guarantee our workmanship for interlocking paver installation for **10 years**.
- We are members of **ICPI, NCMA, CGKA, CTPA, NOFA** and several other trade organizations.
- We own & utilize the latest specialized tools & technology in our installation process.
- **TJB-INC will only start one job at a time so you will get our complete attention.**

What to expect during delivery, set-up, & installation of your paver project

- We will work with you to identify an accessible area for the delivered pavers, crushed stone (aggregate) and bedding sand. (Polymeric Joint Sand is brought in bags when utilized)
- **TJB-INC** will follow your local municipality's regulations regarding temporary street storage of these construction materials. (If needed)
- We will contact the local utility location service to mark underground utilities. This service will not locate lawn irrigation pipes, so we ask for your assistance by identifying sprinkler lines & heads that others have installed prior to beginning your project.
- As the crew begins work, there will be some dust, dirt and noise from the equipment that removes the old pavement and excavates and places the new base, bedding sand and cutting of the pavers.
- Keep all doors and windows closed during construction to help keep dust from entering your house.
- Please keep all pets and children away from the construction area. Alert your neighbors so they can do the same.

*If a driveway is planned, do not leave your car in the garage. **TJB-INC** will advise you on the best parking location for cars away from the crew and construction equipment.*

**** SAFETY COMES FIRST! ****
